Subject index to Volume 10

Acacia senegal
hydration characteristics of gum exudate, investigation by differential scanning calorimetry 11
processing of gum arabic, reduction in viscosity/gelling properties to acceptable industrial levels 309

Acetobacter xylinum
isolation/partial characterization of cellulose 75

Agarose
time-resolved study of gelation, spontaneous symmetry-breaking pathways 91

Alginate
determination of sphericity of hydrocolloid beans, comparison of methods 263

Alginates
liquid-core hydrocolloid capsules, production/modification of mechanical/slow-release properties, study 21
thermodynamic compatibility with gelatin, effect of structural features, aqueous media 1

Alpha-amylase
Bacillus licheniformis, partial hydrolysis of gelatinized/waxy barley starches 269

Amylose
conformation/properties in dilute solution 109

Bacillus licheniformis
alpha-amylase, partial hydrolysis of gelatinized/waxy barley starches 269

Bacterial cellulose
isolation/partial characterization of *Acetobacter xylinum* cellulose 75

Bacteriophage T4
selected charge mutants of lysozyme, effects of charge on protein adsorption kinetics, hydrophobic/hydrophilic solid surfaces 285

Barley
gelatinized/waxy starches, partial hydrolysis by *Bacillus licheniformis* alpha-amylase 269

Bovine serum albumin
gelation with xylose/ribose, Maillard reaction, study by oscillatory rheometry 199

Bread
white, study of staling, effect of water/hydrocolloid 375

Calcium
interaction with soluble wheat protein, gelation properties 255
low *DE* pectin–calcium gels, relationships between shear modulus/concentration at 20–85°C 31

Carboxymethyl dextran
conjugation with b-lactoglobulin, improvement of emulsifying properties 63

κ-Carrageenan
mixed gels with gellan, characterization/properties 277
mixed system with konjac glucomannan, dependence of viscoelasticity/thermal properties on molecular weight 229
Philippines natural grade, effect of cellulose on gel–sol transition temperatures, differential scanning calorimetric studies 441

ι-Carrageenan
rheology of gels containing caseins 151

Carrageenans
dilute solution behaviour of κ-/ι-/λ-carrageenan, light scattering studies 99
in vitro gastric stability 239

β-Casein
dynamic surface tension/adsorption properties 395
native/pressure-treated, comparative study of foaming properties 335

Casein
gelation/phase separation in maltodextrin–caseinate systems 407

Caseinate
adsorption behaviour in oil-in-water emulsions, effect of KCl 159

Caseins
mechanisms of effects on rheology of i-carrageenan gels 151

Cassava
starch gelatinization in aqueous lipid phase, competition with L2-phase for water 317

Cassia siamea
rheology of seed galactomannan 167

Cellulose
Acetobacter xylinum, isolation/partial characterization 75
effect on gel–sol transition temperatures of Philippines natural grade κ-carrageenan, differential scanning calorimetric studies 441

Effective minimum concentration
determination, spans/tweens, factors affecting water-in-oil-in-water multiple emulsion stability, interfacial parameters 245

Egg yolk
effect of phosphatidylcholine on viscoelastic properties of β-lactoglobulin emulsions 301

Faba bean
proteins, stability of water-in-oil-in-water emulsions 251

Faba beans
globular proteins, stabilization of ultrastructure of dense-packed oil-in-water emulsions 69

Flaxseed gums
chemical composition rheology, effect of genotype on diversity 221

Galactomannan
Cassia siamea seed, rheology 167

Galactomannans
enzyme-modified, mixtures with xanthan, deformation behaviour 123
locus bean gum/guar gum, gradient ammonium sulphate fractionation 295

Gelatin
thermodynamic compatibility of pectins/alginates, effect of structural features, aqueous media 1
whey protein, rheological properties of mixed/pure gels 51

Gellan
mixed gels with κ-carrageenan, characterization/properties 277
shrinking gels, description of apparatus to monitor changes, relationship between optical/mechanical change 137
ultrasonic velocity/circular dichroism spectra in aqueous solutions 133

Gels
shrinking, description of apparatus to monitor changes, relationship between optical/mechanical change 137

Globular proteins
faba beans, stabilization of ultrastructure of dense-packed oil-in-water emulsions 69

Gluten
deamidated, gelation properties, interaction with calcium 255

Guar gum
galactomannans, gradient ammonium sulphate fractionation 295
interaction with starch, effect of salts 329
interaction with xanthans, effect of acyl substituents 117

Gum
locus bean/guar gum galactomannans, gradient ammonium sulphate fractionation 295

Gum arabic
hydration characteristics of *Acacia senegal* gum exudate, investigation by differential scanning calorimetry 11
processing, reduction in viscosity/gelling properties to acceptable industrial levels 309

Gums
flaxseed, chemical composition rheology, effect of genotype on diversity 221

Ice cream
interactions between food components, structure of unfrozen emulsions 385

KCl
effect on adsorption behaviour of whey protein/caseinate in oil-in-water emulsions 159

Konjac glucomannan
mixed system with κ-carrageenan, dependence of viscoelasticity/thermal properties on molecular weight 229

Konjac mannan
interaction with xanthans, effect of acyl substituents 117

β-Lactoglobulin
dynamic surface tension/adsorption properties 395
effect of lecithin on viscoelastic properties of emulsions 301
emulsifying behaviour, effect of high pressure 213
fractionated, determination of association tendency by dynamic light scattering 323
improvement of emulsifying properties by conjugation with carboxymethyl dextran 63
mixed solutions with xanthan, pressure-/heat-induced gelation, mechanical properties/microstructure 203

Lactose
spray-dried emulsions with whey protein/soybean oil, redispersibility/wettability/particle structure 421
spray-dried emulsions with whey protein/soybean oil, surface composition/particle structure 421

Lecithin
effect on viscoelastic properties of β-lactoglobulin emulsions 301

Lipid metabolism
rat, effects of hydrolyzed xyloglucan 369

Liquid-core hydrocolloid capsules
production/modification of mechanical/slow-release properties, study 21

Locust bean
gum interaction with xanthans, effect of acyl substituents 117
gum galactomannans, gradient ammonium sulphate fractionation 295

Lysozyme
selected charge mutants of bacteriophage T4, effects of charge on protein adsorption kinetics, hydrophobic/hydrophilic solid surfaces 285

Maillard reaction
bovine serum albumin gelation with xylose/ribose, study by oscillatory rheometry 199

Maltodextrin
gelation/phase separation in maltodextrin–caseinate systems 407

Molecular weight
approximation by pH determinations, ionic polysaccharides, proton dissociation 45

Oil-in-water emulsions
ultrastructure, stabilization by globular proteins of faba beans 69

Pectin–calcium gels
low *DE*, relationships between shear modulus/concentration at 20–85°C 31

Pectins
thermodynamic compatibility with gelatin, effect of structural features, aqueous media 1

pH determinations
approximation of molecular weight, ionic polysaccharides, proton dissociation 45

Phosphatidylcholine
egg yolk, effect on viscoelastic properties of β-lactoglobulin emulsions 301

Polyoxyethylene adducts
interfacial parameters at hydrocarbon–water interface, determination based on interfacial tension measurements 27

Polysaccharides
guar gum/locust bean gum/konjac mannan, interaction with xanthans, effect of acyl substituents 117
ionic, proton dissociation, approximation of molecular weight by pH determinations 45

Potato
starch, gelation of concentrated suspensions, small deformation properties during heating/cooling 343
starch, large deformation properties of concentrated gels, retrogradation 355
starch concentrated gels, effects of concentration/temerature on mechanical properties 363
starch gelatinization in aqueous lipid phase, competition with L2-phase for water 317

Proton dissociation
ionic polysaccharides, approximation of molecular weight by pH determinations 45

Ribose
gelation with bovine serum albumin, Maillard reaction, study by oscillatory rheometry 199

Salts
effect on starch/guar gum interaction 329

Soluble wheat protein
gelation properties, interaction with calcium 255

Sorbitan fatty acid esters
interfacial parameters at hydrocarbon–water interface, determination based on interfacial tension measurements 27

Soybean oil
spray-dried emulsions with whey protein/lactose, redispersibility/wettability/particle structure 421
spray-dried emulsions with whey protein/lactose, surface composition/particle structure 421

Spans
interfacial parameters at hydrocarbon–water interface, determination based on interfacial tension measurements 27
tweens, factors affecting water-in-oil-in-water multiple emulsion stability, interfacial parameters, effective minimum concentration determination 245

Sphericity
determination for hydrocolloid beans, comparison of methods 263

Starch
cassava/potato, gelatinization in aqueous lipid phase, competition with L2-phase for water 317
interaction with guar gum, effect of salts 329
potato, large deformation properties of concentrated gels, retrogradation 355
potato/wheat, concentrated gels, effects of concentration/temerature on mechanical properties 363
potato/wheat, gelation of concentrated suspensions, small deformation properties during heating/cooling 343

Starch–hydrocolloid composites
preparation by steam jet cooking, properties 173

Starches
barley, gelatinized/waxy, partial hydrolysis by *Bacillus licheniformis* alpha-amylase 269

Tofu
retort-resistance caused by incubation with microbial transglutaminase 41

Transglutaminase
microbial, incubation with tofu, cause of retort-resistance 41

Tweens
interfacial parameters at hydrocarbon–water interface, determination based on interfacial tension measurements 27
spans, factors affecting water-in-oil-in-water multiple emulsion stability, interfacial parameters, effective minimum concentration determination 245

Wheat
deamidated soluble proteins, gelation properties, interaction with calcium 255
starch, gelation of concentrated suspensions, small deformation properties during heating/cooling 343
starch concentrated gels, effects of concentration/temerature on mechanical properties 363

Whey protein
adsorption behaviour in oil-in-water emulsions, effect of KCl 159
dicationic-induced gelation of pre-denatured isolate 193
gelatin, rheological properties of mixed/pure gels 51
particulate gels, quantiative characterization by image analysis 179
spray-dried emulsions with lactose/soybean oil, redispersibility/wettability/particle structure 421
spray-dried emulsions with lactose/soybean oil, surface composition/particle structure 421

Whey proteins
solubility, effects of ionic strength, colloid chemical approach 143

Xanthan
double-stranded, thermal stability, release of disordered oligomers upon partial acid hydrolysis 83
mixed solutions with β-lactoglobulin, pressure-/heat-induced gelation, mechanical properties/microstructure 203
mixtures with enzyme-modified galactomannans, deformation behaviour 123

Xanthans
interaction with guar gum/locust bean gum/konjac mannan, effect of acyl substituents 117

Xyloglucan
hydrolyzed, effects on rat lipid metabolism 369

Xylose
gelation with bovine serum albumin, Maillard reaction, study by oscillatory rheometry 199
